

BTS 80

	Montageanleitung Bitte nach dem Einbau dem Betreiber aushändigen! Bodenüberschließer für Links-, Rechts- und Pendeltüren 	Fixing instructions Please hand over to end user after installation. Floor spring for left hand, right hand and double action doors. 	Instructions de montage à remettre à l'utilisateur après montage Pivots à frein pour portes gauche, droite et va-et-vient. 	Montage-handleiding Na het inbouwen deze instructies aan de gebruiker overhandigen s.v.p. Hydraulische vloerbeveer voor linkse, rechtse deuren met een aanslag of doordraaiende deuren. 	Instrucciones de montaje Después del montaje remitir las instrucciones al utilizador. Cierrapuertas de suelo para puertas a derecha, izquierda o vaivén. 	Istruzione di montaggio Da consegnare al cliente a montaggio eseguito! Chiudiporta a pavimento per porte sinistra, destra e porta a vento. 	Monterings-anvisning Udleveres venligst til brugeren efter montering. (Til- og frakobling af konstanthold.) Gulvdørslukker til venstre, højre og svindøre 	Asennusohje Jätäkää tämä ohje asennuksen jälkeen oven hoitosta vastaavalle henkilölle. Lattiaovensuljin sekä vasen- että oikeakätiisiin ja heilurioviin 	Monterings-anvisning Vennligst lever monteringsanvisningen til vaktmesteren etter montering. Gulvdørslukker for L-, R- og pendeldører

  	<p>Montage Das Hinterachsmaß ④ beträgt 51 mm und muß bei Rohwänden und Sichtbeton berücksichtigt werden. Bis auf 15 mm kann dieses Maß durch Putz, Fliesen usw. reduziert werden. Hierbei werden die Befestigungsschrauben ③ bis zum Anschlag eingeschraubt. Dann wird der Schieber eingesetzt, ausgerichtet und mit der Befestigungsschraube ② befestigt. Höhenstellschrauben ⑤ und wenn möglich ⑥ anziehen. Der Ausbau erfolgt in umgekehrter Reihenfolge. Wird Heißasphalt vergossen, muß BTS vorher aus dem Zementkasten genommen werden.</p> <p>Einstellung der Schließgeschwindigkeit, Schließer verzögerung und Feststellvorrichtung Zuerst wird mit Ventilschraube ① die Schließgeschwindigkeit im Bereich von ca. 80° bis 0° eingestellt. Mit Ventilschraube ② werden 3 Funktionen eingestellt: 1. Geschwindigkeitsregulierung von 180° bis ca. 80° Türöffnung. (Drehen des Ventils im Uhrzeigersinn = langsam.) 2. Delayed closing from 180° to approx. 80°. 3. Hold open variable between 85° and 180°. By turning regulating valve ③ clockwise adjustable time delay is obtained. By closing regulating valve completely, hold open is obtained. With regulating screw ④ start of hold-open is adjustable from approx. 75° to 105° (turn right = 105°, turn left = 75°). The end of delayed closing can be set from approx. 105° to 75° in the same way.</p>	<p>Installation The pivot centre dimension ④ is 51 mm and must be taken in consideration in regard to unfinished, or concrete walls. After installation dimension ④ can be reduced to 15 mm by tiles, plaster or other wall finishes. Hierbei werden die befestigungs-schroben ③ tot der anschlagnge-draaid. Hiermit wird der vloerpoet in de cementkast gezet, waterpas gesteld en met de bevestigingsschroeven ② vastgezet. Hoogteverstelschroeven ⑤ en indien mogelijc ⑥ aanbrengen. De ontbouwing moet in omgekeerde volgorde. Bij het aanbrengen van heet asfalt of laswerk moet de vloerpoer uit de cementkast worden genomen.</p> <p>Choix de la vitesse de fermeture, délai vertraging en vertraging van vastzetting. Zuerst regelt men de sluitnelheid in de sector van 80° tot 0°. Met de ventilschroef ① wordt de sluitnelheid in de sector van 80° tot 0° ingesteld. Met de ventilschroef ② stelt men 3 functies in: 1. Snelheidseinstelling van 180° tot ca. 80° opening. (Draaien van het ventiel in de richting van de klok = langzaam.) 2. Retardement à la fermeture de 180° à environ 80° (continuer à visser). 3. Antral constant hydraulique entre 180° et 85° (par fermeture complète de la valve). Avec la vis de réglage ③ on peut régler progressivement le début de la fonction arrêt dans la plage de 75° à 105° (tournez vers la droite = 105°, tournez vers la gauche = 75°). La fin de la fonction retardement à la fermeture peut être ajustée de la même manière dans la plage de 105° et 75°.</p>	<p>Plaatsing: De hielmaat ④ bedraagt minimaal 51 mm en moet bij het sparen in zowel ruw-als schoon werk in acht worden genomen. Hierbij worden de bevestigings-schroeven ③ tot de aanslag inge-draaid. Hiermit wordt de vloerpoet in de cementkast gezet, waterpas gesteld en met de bevestigingsschroeven ② vastgezet. Hoogteverstelschroeven ⑤ vastdraaien en indien mogelijk ⑥ natrekken. Demontage: Aflozen der tomillos de regulación en altura ④ y el tomillo de fijación ⑤ y sacar el cierrapuertas. Montaje: Colocar el cierrapuertas y fijar el tomillo de fijación ⑤ y los de regulación en altura ④</p>	<p>Montaje La medida del eje trasero asciende a 51 mm y tiene que ser tomada en cuenta en las paredes basta y de hormigón liso. Esta medida puede ser reducida hasta 15 mm colocando azulejos o con revoque, etc. Si la caja de empotrado viene fijada en el suelo, quitar antes el cierrapuertas. Desmontaje Aflojar los tomillos de regulación en altura ④ y el tomillo de fijación ⑤ y sacar el cierrapuertas. Montaje: Aflojar los tornillos de regulación en altura ④ y el tornillo de fijación ⑤ y colocar el cierrapuertas y fijar el tornillo de fijación ⑤ y los de regulación en altura ④</p>	<p>Montaggio La misura di 51 mm e ne deve essere tenuto conto per muri vuoti o per pareti con uno strato di cemento decorativo. Per mezzo di calcestruzzo, piastrelle o similari questa misura può essere diminuita di 15 mm al massimo. Le viti di fissaggio ④ vengono avvitate fino all'arresto, poi viene inserito il chiudiporta, centrato e fissato con le viti di fissaggio ⑤. La vite di registro dell'altezza ④ e la vite ⑤ se possibile, vengono strette. Smontaggio: Lo smontaggio avviene in modo inverso. Nei casi in cui viene utilizzato asfalto caldo si deve togliere il chiudiporta dalla scatola da incrementare.</p>	<p>Montering: Afstandsmål ④ bag akslen er 51 mm, og må ved råvægge eller dækpuds tages i betragtning. Efter nedstabilning af cementkassen kan dette mål formindskes med puds, fliser, beklædning el. lign. til min. 15 mm. Befastigellesskruerne ④ skrues i tilslag. Lukkeren isættes, tilpasses og fastgøres med fastspændingsskruerne ⑤. Højdereguleringskruerne ⑥ og cm muligt ⑦ spændes. Montering: Afmontering: Ved anvendelse af varm asfalt skal BTS lukkeren tages ud af cementkassen inden nedstabilningen. Afmontering: sker i omvendt rækkefølge.</p>	<p>Asennus La asennuskotelon takareunasta on 51 mm ja tämä on huomioitava karmirakennetta liittääseenä seinään. Rappauksella, laatoituksesta tai muulla vastaavalla seinäpiirtoiteella voidaan tätä mitata alleita 15 mm: iin saakka. Mikäli suoritaan kuumaa-asfaltointia on BTS poistettava sitä ennen asennuskotelosta. Irritus: Kiinnitysruuvi ④ kierretään pohtiaan saakka, sen jälkeen suljin paantaan paikalleen ja kiinnitysruuvi ⑤ kiristetään. Korkeuden säätöruuvi ⑥ ja mahdollisesti myös ⑦ kierretään kiinni. Suljimen irrottaminen tapahtuu pääin vastaisessa järjestyksessä. Mikäli kuuma-asfaltointia valetaan, on BTS -suljin ensin poistettava asennuskotelosta.</p>	<p>Montering. Bakkantmål ④ er 51 mm og må tas hensyn til ved stoping. Når veggen pusses eller fliser monteres, kan dette mål reduseres til 15 mm. Innsetting av lukker: Skrub i festeskruene ④, sett i og rett opp lukkeren. Skru så festeskruene ⑤ og ⑥ fast. Trekk til hoydestillingskruene ⑦ og hvis mulig ⑧. Utgång: omvänt rekkeslag NB! Hvis sementkassen stipes fast med varm asfalt el. lign., må lukkeren tas ut av sementkassen.</p>	
	<p>Austausch Steckachse Verbindungsschraube ② mit 6kt-Schraubendreher 5 mm heraus-schrauben. Normale Steckachse ① heraus-nehmen. Schutzkappe ③ in die Rille der ver-längerten Steckachse ② drücken, Steckachse in Schieber einsetzen und mit zugehöriger Verbindungs-schraube fest anziehen.</p>	<p>Exchange of spindle Insert Remove screw ② with allen key (5 mm) and remove standard spindle insert ①. Push dust cap ③ into groove of ex-tended spindle insert ②. Fit extended spindle into closer and tighten securely.</p>	<p>Échange de l'axe Dévisser la vis de jonction ② avec une clé 6 pans 5 mm. Déposer l'axe ①. Presser le capuchon de protection dans la gorge de l'axe rallongé ③. Placer l'axe rallongé dans l'appareil et bloquer la vis.</p>	<p>Verwisselbare steekas Inbusschroef ② met 6 kantige schroovedraaier 5 mm los-schroeven. Normale steekas ① uit-nemem. Stofkap ③ in de groef van de ver-lengde steekas ② drukken. Verlengde steekas in vloerpoer aanbrengen en de schroef vast aan-trekken.</p>	<p>Cambiar el eje intercambiable Soltar el tornillo ② el cual está introducido en el eje con la llave ALLEN que adjuntamos (5 mm). Quitar el eje normal ① y apretar disco de protección ③ en la ranura del eje elejido ④ (intercambiado). Colocar el nuevo eje ⑤ en el cierrapuertas y apretar el tomillo fuertemente.</p>	<p>Sostituzione dell'asse Con una chiave esagonale da 5 mm svitare la vite ②. Togliere l'asse normale ①. Infilare la cappa di protezione ③ nella scanalatura dell'asse prolungato ④; sistemare quindi l'asse nel chiudiporta e collocarlo forte con l'apposita vite.</p>	<p>Udskiftning af aksel Forbindelsesskruen ② skrues ud med umbraco-nøgle 5 mm. Akslen ① aftages. Sæt jævnesteleskappe ③ fast med en håndtryk i den øverste del af akslen ④.</p>	<p>Jatkaoakselin vaihto Irrota kiinnitysruuvi ② kuusioavaimella koko 5 mm. Irrota normali jatkaoakseli ①. Sijoilevyy ③ painetaan pidennetyn jatkaoakselin ④ ulos, akseli asennetaan suljimeen ja kiertetään huolella kiinnitysruuviin.</p>	<p>Utbryte av aksling. Skrub ② tas ut med sekskantnøkkelen (5 mm) og akslingen ① kan tas ut. Beskyttelseskappe ③ flyttes over på den nye akslingen ④. Forlenget aksel ④ settes inn og festes med skrub ②.</p>
